Across

4. Service that translates human readable hostnames into numerical IP addresses.
5. Temporary assignment of an IP address to a device for a specified period.
11. Network service that automatically assigns IP addresses and related settings to devices.
14. Entry that maps a hostname to an IPv4 value.
15. Entry that maps a hostname to an IPv6 value.
16. Methods used to detect and filter unwanted or fraudulent email.
17. Entry that identifies an alias pointing one hostname to another.

Down

1. Email security method using cryptographic signatures to verify the signer and detect tampering.
2. Entry that identifies which servers receive email for a domain.
3. Setting that consistently assigns the same IP address to a specific device.
6. Email security method specifying which servers may send messages for a domain.
7. Secure connection that commonly uses an encrypted tunnel across the internet.
8. Email security policy that instructs recipients how to handle SPF and DKIM failures.
9. Logical division of a switched infrastructure into separate broadcast domains.
10. Defined pool of IP addresses and settings available for automatic assignment.
12. Entry storing character of strings used for verification and security settings.
13. IP address or range prevented from being automatically assigned to devices.
