Across

3. Very short-range technology commonly used for tap-to-pay and quick pairing.
10. High-efficiency generation designed to improve performance on busy networks.
11. Specific slice of radio spectrum used for communication.
14. Technology that reads data from tagged objects without requiring physical contact.
16. Legacy generation using 2.4 GHz and 5 GHz and multiple antennas.
19. Generation supporting both 2.4 GHz and 5 GHz and multiple antennas.
21. Generation supporting both 2.4 GHz and 5GHz and multiple antennas.
22. Legacy generation using 5 GHz with speeds up to 54 Mbps.
23. Faster Wi-Fi band with less interference but shorter reach.
24. Newest Wi-Fi band with more available spectrum but shorter reach.

Down

1. Choosing the least congested permitted slice of spectrum to reduce interference.
2. High-efficiency generation designed to improve performance on busy networks.
4. Regional rules controlling which portions of radio spectrum devices may use.
5. High-speed generation operating on 5 GHz with multi-user improvements.
6. Range of radio spectrum grouped for a particular type of communication.
7. Family of specifications used for Wi-Fi local networking.
8. Newest generation designed for greater throughput, wider transmissions, and lower latency.
9. Short-range technology for connecting nearby devices and peripherals.
12. Number of times a radio wave repeats each second, measured in hertz.
13. Extension that adds access to the 6 GHz spectrum.
15. Amount of spectrum occupied by one transmission; Wider values can provide greater speed.
16. Legacy generation using 2.4 GHz with speeds up to 54 Mbps.
17. Newest generation designed for greater throughput, wider transmissions, and lower latency.
18. High-speed generation operating on 5 GHz with multi-user improvements.
20. Longer range Wi-Fi band with better wall penetration but more interference.
